HANDMADE IN ITALY

For 50 years, history, experience, and craftsmanship have been part of the creation of every single Crispi boot, adding value and quality to a modern product that does not underestimate the importance of solid traditions. After all this time, we are still loyal to the artisan craftsmanship tradition.

Crispi designs high-quality footwear by choosing only the best leather, working with carefully selected suppliers, and using the most modern technologies. Each of our boots follows the centuries-old tradition of Italian craftsmanship, the one handed down from father to son, from generation to generation.

Together with the artisans, our R&D department selects only the best materials to get the kind of quality our customers have come to expect in our products. Every step in the process, from choosing the leather and fabrics, to the binding techniques and the application of the sole, is handmade in Italy.

SINCE 1975

CRISPI[®] TECHNOLOGY

ABSS
ANKLE BONE
SUPPORT SYSTEM

ABSS - The Ankle Bone Support System revolutionized the comfort and protection of the entire ankle area with a combination of materials that allow the footwear to contour gently to your ankle. This system offers outstanding sprain protection on the roughest terrain, while supporting the ankle in all conditions. Limiting fatigue on the lower joints, even after very long hikes.

BOARDLASTING
MECHANICAL CONSTRUCTION

Boardlasting - TRADITION COMBINED WITH TECHNOLOGY. The perfect connection between torsional rigidity and flexibility is achieved thanks to a mechanical process that wraps the comfortable and soft part of the upper insole frame with the lasting board.

AFS
ANATOMIC FIT
SYSTEM

THE ANATOMIC FIT SYSTEM wraps the full anatomical and natural shape of the foot, developing a sensation of immediate and long-lasting comfort. This allows the boot to feel lighter and uniform, providing sensitivity and better foot control in technical terrain.

DTL
DUAL TECH
LINING

DUAL TECH LINING - Crispi pays almost fanatical attention to the dynamics of feet while walking. While studying foot movement, Crispi developed a new construction technique for the inner lining of a boot, which combines high thermic insulation and a Gore-Tex membrane, extreme resistance to abrasion coupled with naturally comfortable real leather. The result is 100% waterproof, breathable, and long-lasting footwear.

CCF
CRISPI CROSSBOW
FRAME

CRISPI CROSSBOW FRAME - Crispi innovation in the midsole shock absorbing system. This insert follows a particular form in a waving shape similar to a crossbow, which offers perfect stability. Sustaining the foot, while at the same time absorbing shock and improving braking, even in the most challenging terrain.

TWT
THERMO WIRE
TECHNOLOGY

THERMO WIRE TECHNOLOGY - An innovative system developed by Crispi which increases support to the upper by adding extra structure, which provides better stability, protection, and support to the shoe.

WFW
WRAPPING
FRAMEWORK

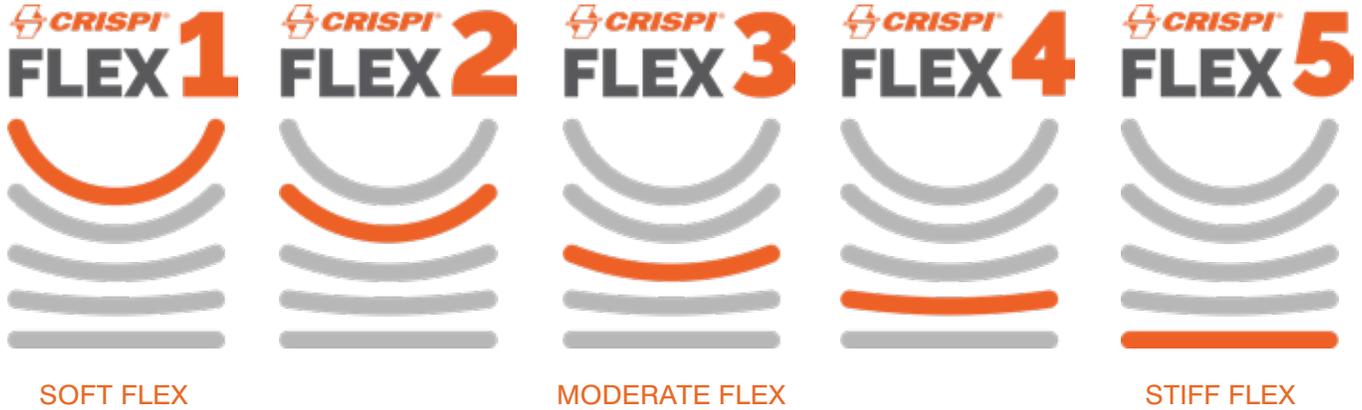

WRAPPING FRAMEWORK - Structural over injection of a polymer fused to the external part of the upper. This fusion becomes part of the shoe design which adds support and structure, while minimalizing added weight and increasing breathability.

EFX
ELASTOFLEX SYSTEM

ELASTOFLEX SYSTEM - EFX is the newest midsole by Crispi. The EFX midsoles construction represents the new generation of Crispi midsoles. Elastoflex offers more effective and progressive flex for more stable foot placement, high cushioning, and long-lasting comfort.

CRISPI[®] FLEX RATING

The Crispi US flex rating was introduced almost a decade ago to help hunters select the proper boot for their needs. Boot flexibility is a personal preference, but selecting the proper flex can be crucial in certain types of terrain.

The Crispi US flex rating ranks boots on a scale of 1 - 5. A flex 1 is very soft, similar to a tennis shoe, and more suitable for everyday use. A flex 5 would be very stiff, for the most rugged terrain and extreme hunts. A 3 flex will be a moderately stiff boot that combines flexibility and support.

WATERPROOF TECHNOLOGY

GORE-TEX INSULATED COMFORT

GORE-TEX Insulated Comfort Footwear comes in a range of insulation options to keep feet dry and comfortably warm during cold conditions and winter outdoor activities.

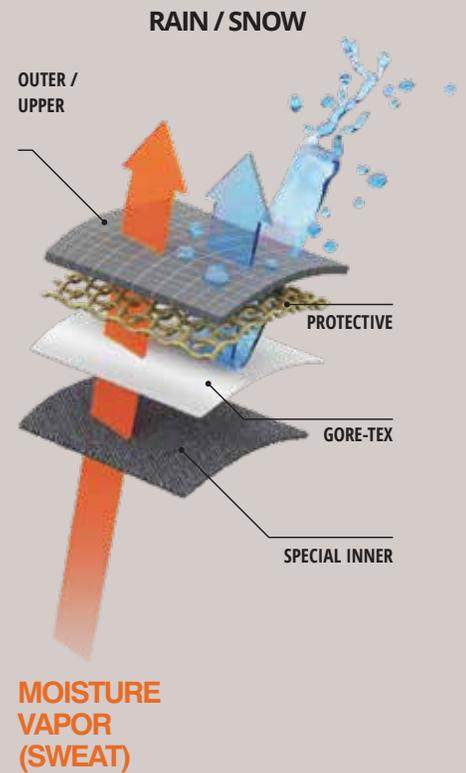

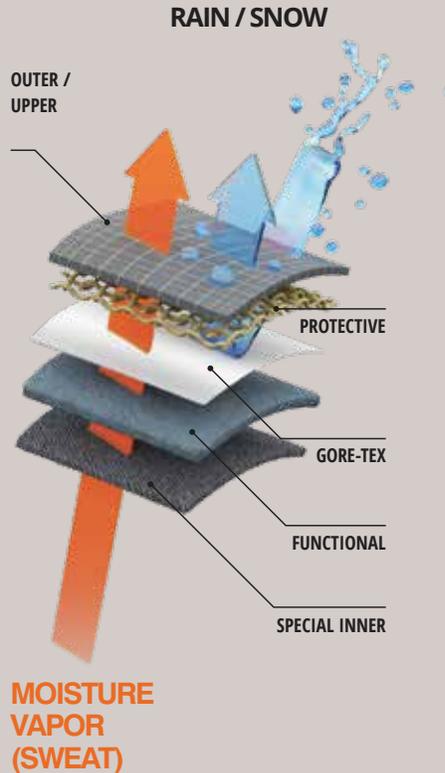

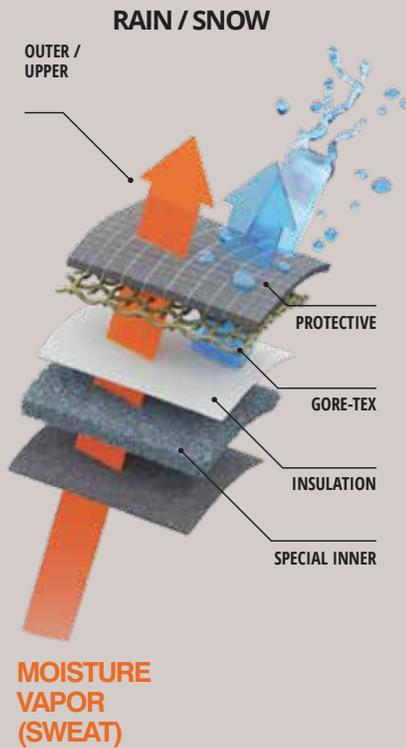

GORE-TEX PERFORMANCE COMFORT

GORE-TEX Performance Comfort Footwear offers optimized climate comfort for moderate weather conditions and a wide range of outdoor activities.

GORE-TEX EXTENDED COMFORT

GORE-TEX Extended Comfort Footwear is ideal for moderate and warmer conditions. Great for high-output activities and everyday use. The technology is perfect for constant changes between indoors and outdoors, standing and walking, working and leisure time.

 **CRISPI**[®]

OUTSOLE TECHNOLOGY

The best solution for any challenge

VIBRAM®
FULL CONTROL

VIBRAM® FULL CONTROL SOLE

Unparalleled grip and stability plus maximum comfort, thanks to the Vibram® soft rubber compound and design. Suitable for any mountain terrain, conditions, and excellent in ascents and descents under heavy loads.

- Vibram® HELIX LUGS are designed to offer excellent traction, stability, and braking properties in all terrain and conditions.
- The unique geometry of the front lugs, and the inner tread offers maximum traction and grip when climbing and traversing slopes and side hills.
- The asymmetrical geometry of the rear lugs, and the outer part of the tread ensures maximum stability and braking during descent.
- Proprietary Crispi Design.

VIBRAM®
MEGAGRIP

VIBRAM® MEGAGRIP SOLE

Maximum grip performance, stability, and walking comfort thanks to the Vibram® Megagrip compound. Suitable for mountain terrain and mid, long backpacking routes.

- Unparalleled grip on wet and dry surfaces.
- Downhill braking performance and foot protection.
- Reliable on uneven grounds, good underfoot feedback.
- Proprietary Crispi Design.

VIBRAM®
CURCUMA

VIBRAM® CURCUMA SOLE

The Vibram® sole offers high comfort on uneven ground and excellent grip in the most difficult conditions. The particular prismatic surface, moreover, reduces the weight of the outsole.

- Large contact area for grip performance.
- Lugs with opposing heights for better traction and braking.
- Undercut heel for downhill braking performance.

OUTSOLE TECHNOLOGY

The best solution for any challenge

VIBRAM®

VIBRAM® HEAT RATED SOLE

A specific compound with required flame resistance and the legendary Vibram® standards, performance, grip, and durability. Recommended for fire fighting applications where heat and/or flame resistance is essential.

**CRISPI
CLAW™**

CRISPI® CLAW SOLE

Better grip performance and abrasion resistance thanks to the high quality compound formulation of the CLAW™ sole.

- Prismatic rubber construction design to optimize lightness and durability ratio.
- Self-cleaning grooves for a better stability and slip resistance on the roughest terrains.
- Extended ground surface contact on the toe and heel area to increase traction and stability.
- Proprietary Crispi Design.

VIBRAM®

VIBRAM® ACTIVE FEELING SOLE

High performance and lightweight speed hiking sole for moving faster and lighter in mixed terrain.

- Innovative double-height lugs: higher lugs work on flat terrain, while lower lugs active on uneven terrain. More grip when required, improving long-lasting comfort.
- Self clearing open design for better traction and safety.
- Versatile and effective performance on mixed terrain.
- Proprietary Crispi Design.
